Profile

AI & Backend Developer specializing in real-time LLM applications, intelligent automation, and scalable API-driven systems using Python and FastAPI. Focused on solving real-world problems through automation and delivering reliable, production-ready software.

Education

B.E in Computer Science 2022 – 2026

PCET's Nutan Maharashtra Institute of Engineering and Technology *CGPA: 8.15*

Projects

Saarthi – Real-Time 3D AI Tutor Platform

React, Three.js, FastAPI, WebSocket, Redis, PostgreSQL, Google Gemini

- Built a real-time LLM-powered tutoring platform to address the lack of real-time, interactive doubt solving in one-way learning platforms, using WebSocket for real-time communication, Redis for session memory, and PostgreSQL for persistent data storage.
- Implemented an end-to-end AI pipeline (Speech-to-Text → Prompt Processing → Gemini API → Text-to-Speech → 3D avatar rendering with lip-sync) to enable interactive and immersive learning experiences.
- Deployed a production-ready platform with an analytics dashboard, enabling students to resolve doubts in real time with continuous 24/7 access.

ClarifAiSQL – Natural Language to SQL Learning Platform

Python, FastAPI, SQLite, Google Gemini API

- Developed a full-stack application that converts natural language queries into SQL, explains query logic, and returns real-time results from an in-memory SQLite database.
- Implemented a structured LLM pipeline for SQL generation, validation, explanation, and safe execution using FastAPI and SQLite with in-memory processing to avoid persistent data storage.
- Deployed a production-ready application enabling dynamic SQL learning for beginners and faster data analysis through real-time query execution.

Operis – Platform that supports faster decision-making processes

FastAPI, SQLAlchemy, Scheduler-based Monitoring, LLM Integration

- Built a system to solve the problem of managers checking multiple tools (Slack, Jira, GitHub) manually to understand project status.
- Developed a centralized dashboard with signal ingestion, priority scoring, risk tracking, decision insights, and project health monitoring.
- Reduced manual work by combining project updates from multiple tools into a single dashboard, enabling managers to make faster and better decisions.

Experience

AI / ML Intern Dec 2024 – Jan 2025

InternPe *Remote*

- Completed training in supervised learning, preprocessing, and model evaluation using scikit-learn.
- Built and evaluated classification models using standard performance metrics.

Technical Skills

- **Languages:** Python, SQL
- **AI/ML:** Machine Learning, LLM APIs, Prompt Engineering, Model Integration
- **Data Science:** NumPy, Pandas, Matplotlib, scikit-learn
- **Backend:** FastAPI, REST APIs, WebSocket
- **Tools:** Git, GitHub, Vercel, Render, Railway, Jupyter
